UR5639 Polyurethane Resin

UR5639 is a two-part, soft optically clear polyurethane resin ideal for use in protective applications. Due to a carefully selected blend of components an extremely durable medium viscosity system is achieved, which can be used for a wide variety of applications.

- Water white transparency; ideal for LED applications
- 2:1 mix ratio; allows ease of processing
- Does not contain IPDI; low hazard material
- High resistance to weather/UV; suitable for a range of environments

Approvals	RoHS-2 Compliant (2011/65/EU):	Yes
	UL Approval:	No

Typical Properties

Liquid Properties:	Base Material	Polyurethane
	Density Part A - Resin (g/ml)	0.96
	Density Part B - Hardener (g/ml)	1.16
	Part A Viscosity (mPa s @ 23°C)	1690
	Part A Viscosity (mPa s @ 35°C)	804
	Part B Viscosity (mPa s @ 23°C)	700
	Mixed System Viscosity (mPa s @ 23°C)	1300
	Mix Ratio (Weight)	2:1
	Mix Ratio (Volume)	2.38:1
	Usable Life (20°C)	~25 mins
	Gel Time (23°C)	~34 mins
	Cure Time (23 °C)	24 hours
	Cure Time (60 °C)	4 hours
	Colour Part A - Resin	Clear
	Colour Part B - Hardener	Clear
	Storage Conditions	Dry Conditions: Above 15°C, Below 35°C
	Shelf Life	12 months
	Shrinkage	< 1%

Cured System:	Refractive Index	1.487
	Thermal Conductivity (W/m.K)	0.20
	Cured Density (g/ml)	1.03
	Temperature Range (°C)	-40 to +120
	Max Temperature Range (Short Term (°C)/30 mins) (Application and Geometry Dependent)	+130
	Dielectric Strength (kV/mm)	11
	Volume Resistivity (ohm-cm)	10 ¹⁴
	Shore Hardness	A55
	Colour (Mixed System)	Water White
	Flame Retardancy	No
	Loss Tangent @ 50 Hz	0.025
	Permittivity @ 50 Hz	3.50
	Comparative Tracking Index	Not Measured
Water Absorption (9.7mm thick disk, 51mm diameter) 10 days @ 20°C	1.36%	

Mixing Procedures

Resin Packs

When in Resin pack form, the resin and hardener are mixed by removing the clip and moving the contents around inside the pack until thoroughly mixed. To remove the clip, remove both end caps, grip each end of the pack and pull apart gently. By using the removed clip, take special care to push unmixed material from the corners of the pack. Mixing normally takes from two to four minutes depending on the skill of the operator and the size of the pack. Both the resin and hardener are evacuated prior to packing so the system is ready for use immediately after mixing. The corner may be cut from the pack so that it may be used as a simple dispenser.

Bulk Mixing

When mixing, care must be taken to avoid the introduction of excessive amounts of air. Automatic mixing equipment is available which will not only mix both the resin and hardener accurately in the correct ratio but do this without introducing air. Containers of Part A (Resin) and Part B (Hardener) should be kept sealed at all times when not in use to prevent the ingress of moisture. Bulk material must be thoroughly mixed before use. Incomplete mixing will result in erratic or partial curing.

Additional Information

- Cleaning:** It is far easier for machines & containers to be cleaned before the resin has been allowed to cure. Electrolube's RRS is suitable for cleaning machines and containers and cured resin may be slowly softened and removed by soaking in our RRS.
- Curing:** Do not heat cure large volumes immediately. Allow these to gel at room temperature and post-cure at high temperature if required (refer to liquid properties for details). The material is not suitable for thick sections above 50mm as the exotherm build up during cure will create voids.
- Storage:** When storing under very cold conditions, the hardener may crystallise. If this occurs, simply warm (40°C) the container gently until all crystals have re-melted.
- Health & Safety:** Always refer to the Health & Safety data sheet before use. These can be downloaded from www.electrolube.com
